**Co-founder of CongerLH will be giving a large bulk of his profits to promote financial literacy**  
Next Generation Environmental Friendly Anti-Rust Protection

The founders of Conger LH believe in giving back just as much as they want to protect the health of their customers. Ramapo College finance professor, Murray Sabrin, who is also a co-founder and president of CongerLH, will be giving a large bulk of his profits to provide economic education for high school and college students at free market organizations he is affiliated with, promote financial literacy, and fund nonprofit health care centers.

Even before the profits from Conger LH materialize, Dr. Sabrin and his wife Florence created the Sabrin Center for Business Excellence at Ramapo College in 2007 with a gift of \$250,000. Dr. Sabrin was a founding trustee of BVMI, a nonprofit health center in Hackensack, New Jersey. He and his wife have been generous contributors to BVMI over the years.

"Marketing Conger LH to both commercial/industrial users and retail markets will not only provide facility managers with a safe and effective lubricant, rust prohibitor, and water repellent, but will also give homeowners, we believe, the best product in the marketplace to use around the house or apartment for scores of applications," says Dr. Sabrin.

According to Paul Muller, Conger's CEO and co-founder, "Rather than letting bikes, gardening tools, or machinery decay due to rust and moisture, Conger restores them back to functioning condition all while not letting new rust form. A small application of this anti-rust protection can make those various items last. In the home it can be worrisome to have fumes be spread around, especially around small children. However with the safety and eco-friendliness of Conger LH you won't have to worry about the anti-rust protection being a problem around children. It's safe and they can be in the same space when using the product."

Ralph S., Fleet Superintendent, NY Waterway said, "We have used your product for wire connectors on our control systems and to remove frozen parts due to corrosion with excellent results."

"As the owner of a fitness facility, I searched for the finest lubricant to maintain my equipment. But after numerous complaints of odors, and realizing the potential toxicity of certain products, I decided to search for a 'green' alternative... I have so much confidence in this product that I do not hesitate applying it to threads within products that have close application to skin surfaces. Thank you Conger LH for taking lubrication to the next generation...the Green Revolution!" said Attila Kahn of Fitness-One-on-One in Englewood Cliffs.

**About Conger LH**

Developed and manufactured in the United States, Conger LH™ is the world's first Lubrihibitor™, combining the properties of a lubricant, a rust prohibitor, and a water repellent. This unique high performance product contains no harmful VOCs, CFCs, solvents, propellants, or silicone and is environmentally-safe right down to its packaging, which foregoes aerosol cans for more ecofriendly drip bottles or pump sprays. While the product is mainly intended for commercial and industrial use, it is also effective on a wide range of consumer items such as tools, motors, bikes, and outdoor equipment. Packaging ranges from 2 ounce bottles all the way up to industrial 55-gallon drums and is sold both online at <http://congerlh.com> and through select distributors, while retail distribution is being established. For more information, contact Paul Muller at (201) 445-0015 or [info@congerlh.com](mailto:info@congerlh.com), and follow us on Facebook [www.facebook.com/congerlh](http://www.facebook.com/congerlh).
